

Burner Can

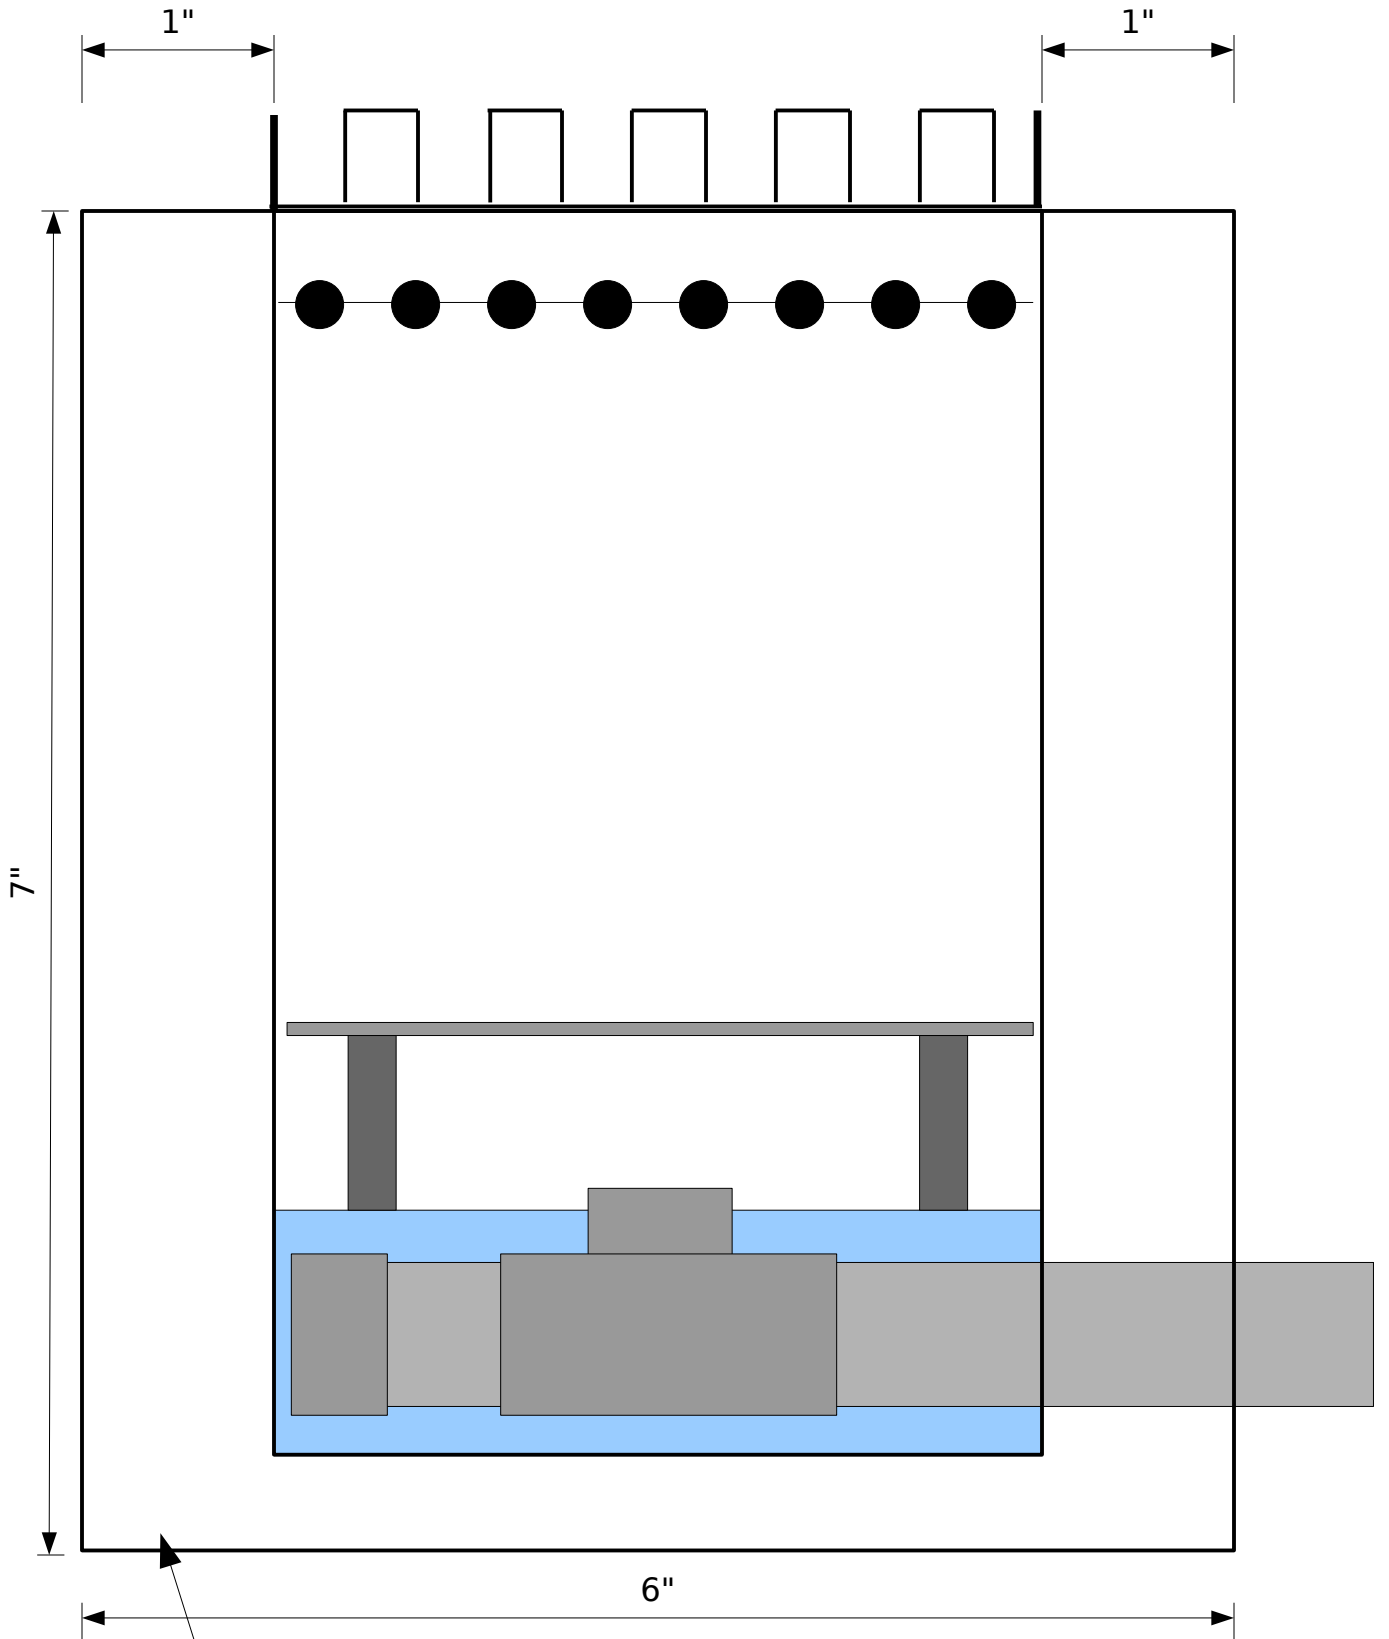

This is a picture of the burner after the concrete set up. The pipe will go through the secondary air can and the outside 5 gallon bucket.

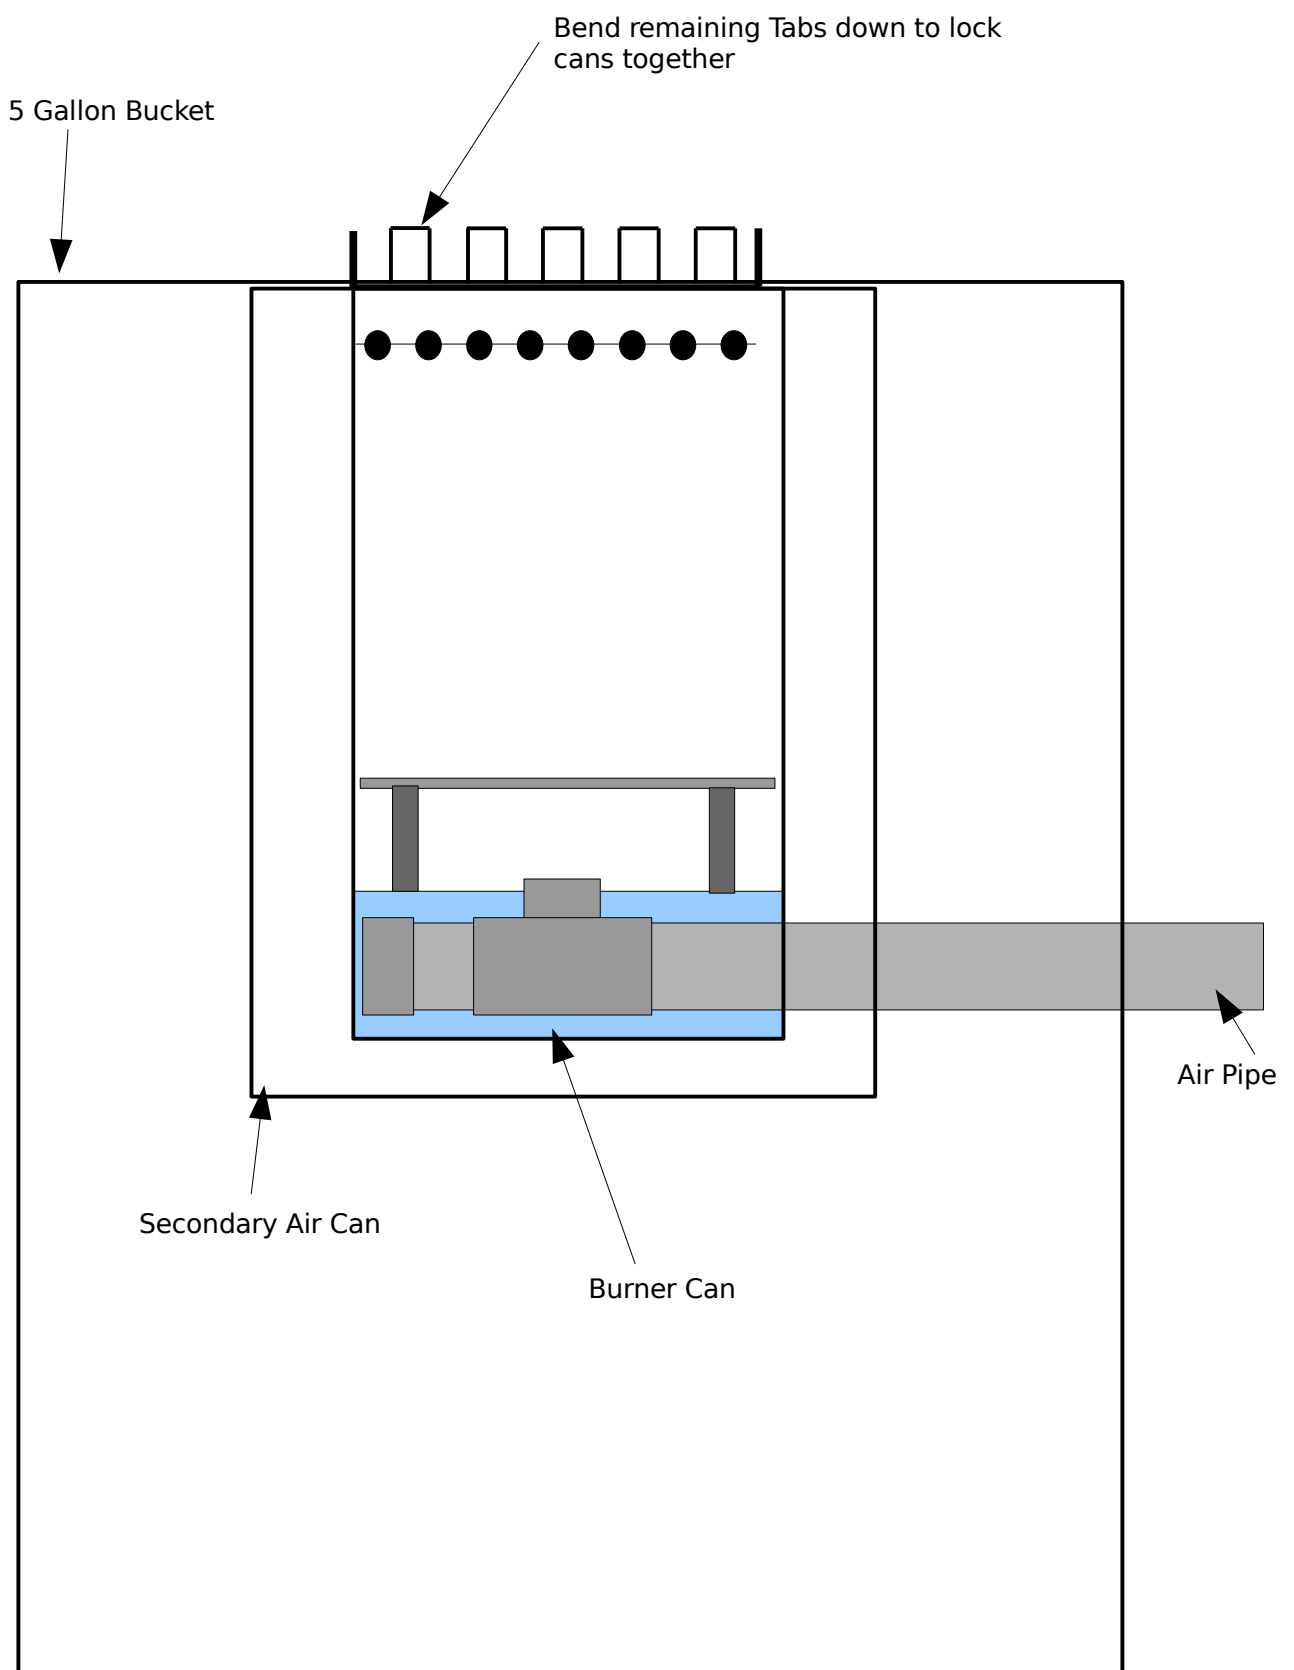

This is what it looks like down inside the burner. Tape is still there but will be removed as it was used to cover the hole so no concrete would get inside.

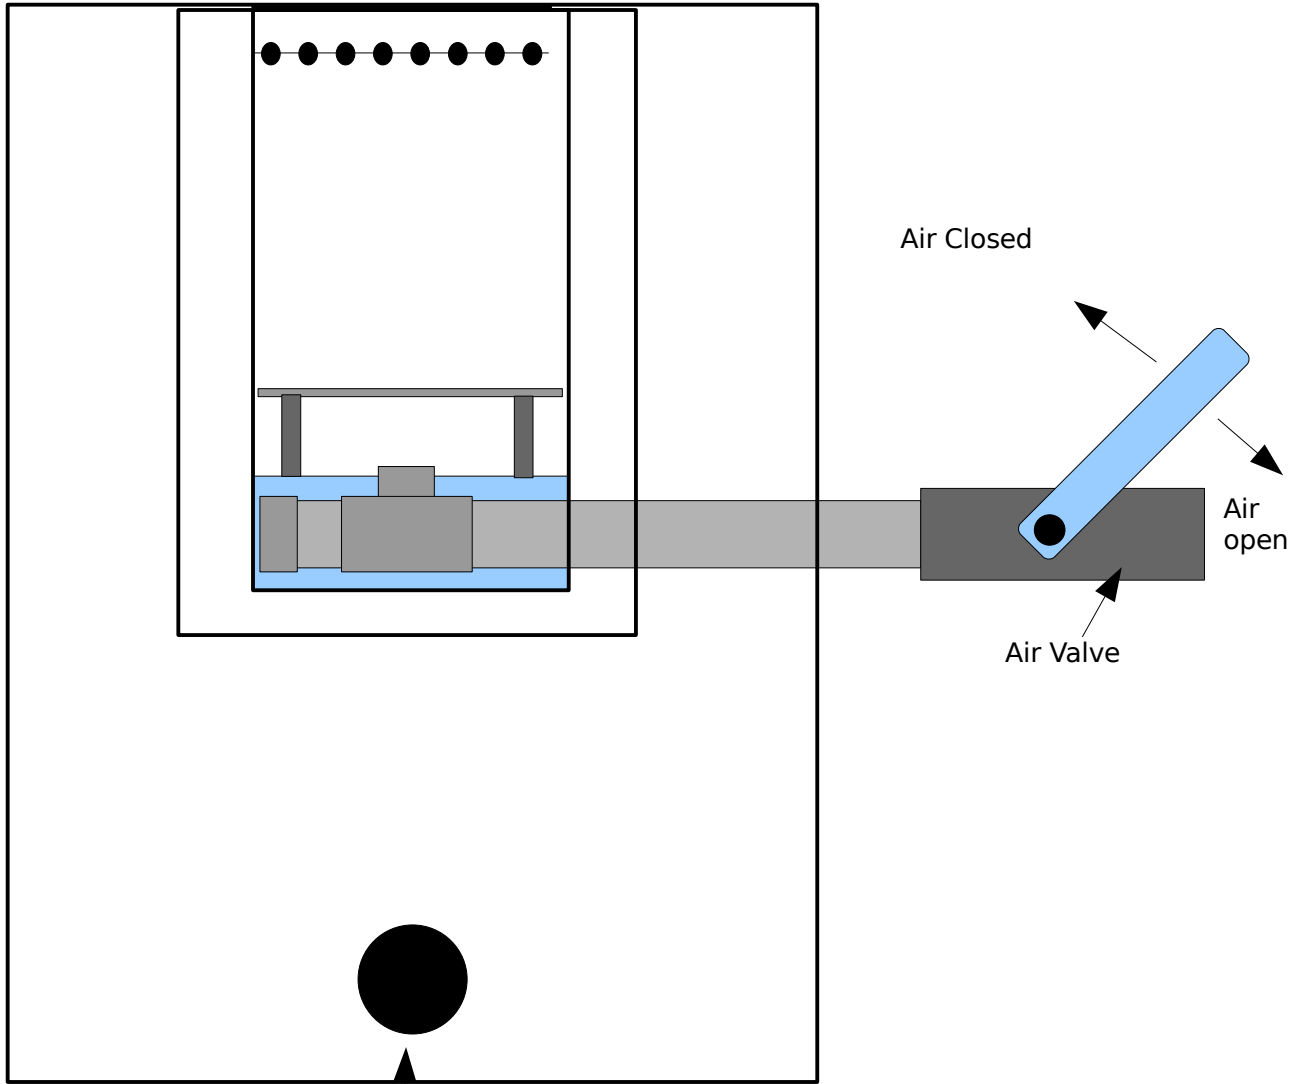

Secondary Air Can

This is down inside the Bucket and the secondary air can. I will have to cut through both can to get the air pipe to the outside for the valve to connect.

Not to Scale

4 - 2" holes equally space around bucket
This is to allow secondary air in
